Email: jbringew@umd.edu

SUMMARY STATEMENT	I'm a 3rd year PhD candidate in theoretical physics and a Department of Energy Computational Science Graduate fellow. My research interests span many aspects of quantum information and quantum computing. Current areas of focus include adiabatic quantum computation, quantum information geometry in relation to parameter estimation, and quantum algorithms for nuclear theory.		
EDUCATION	Doctoral Candidate , University of Maryland, College Park <i>Advisor: Alexey Gorshkov</i>	2018–Present	
	B.S. Physics , University of Maryland, College Park <i>Cum laude with high honors in physics.</i>	2014–2018	
FELLOWSHIPS	Department of Energy Computational Science Graduate Fellow	2018-2022	
	Lanczos Graduate Fellow , Joint Center for Quantum Information and Computer Science	2018-2020	
	Banneker/Key Scholar , University of Maryland, College Park	2014-2018	
AWARDS	Communicate Your Science Essay Contest Winner , Department of Energy Computational Science Graduate Fellowship	2019

SERVICE TO SCIENTIFIC COMMUNITY	Referee for Quantum		
	Organizer of QuICS-JQI-CMTC Friday Seminar	2020–2021	
	Panelist at Conference for Undergraduate Underrepresented Minorities in Physics (cu2mip)	Jan. 2021	
	Volunteer at University of Maryland Prospective Graduate Student Open Houses	2019-2021	

MENTORSHIP	Victoria Adebayo (Howard University) on classical simulation of adiabatic quantum computation. Timothy Qian (Montgomery Blair High School) on quantum sensor networks (Regeneron Science Talent Search 5 th place winner).	
TEACHING	Math Tutor , University of Maryland	2016-2018
EXPERIENCE	Teaching Assistant , Philosophy of Quantum Mechanics, University of Maryland	Fall 2016
	Martial arts instructor , Lake Norman Martial Arts Academy	2010-2018
OUTREACH	Participant , Skype a Scientist	2021
	Writing for non-scientific audience	2019-
	Selected writing (see website for more): <ul style="list-style-type: none"> • “Spherical cows: Using barnyard animals to understand quantum computing.” (2019) – won Communicate Your Science Essay Contest, published in Deixis Magazine (magazine on computational science at DoE national labs) 	
OTHER	Physics Education Research Seminar , University of Maryland	Fall 2020
TRAINING	Workshop on Science Communication hosted by Skype a Scientist organization	Aug. 2020
PROFESSIONAL	American Physical Society (APS)	
MEMBERSHIPS	American Association of Physics Teachers (AAPT)	
INVITED TALKS	2. “Lattice data in the JAM framework.” Amherst Center for Fundamental Interactions (ACFI) Workshop on QCD Real-Time Dynamics and Inverse Problems. (Oct. 2020) Invited Talk. 1. “Confronting lattice parton densities with global QCD analysis.” AI for Nuclear Physics Workshop. (Mar. 2020) Invited Talk.	
OTHER	15. “Optimal measurement of field properties with quantum sensor networks.” March Meeting 2021. (Mar. 2021) Talk. 14. “Optimal measurement of field properties with quantum sensor networks.” QuICS Stakeholder Day. (Mar. 2021) Poster. 13. “Estimating multiple functions with quantum sensor networks.” Gorshkov Group Meeting. (Jan. 2021) Talk. 12. “Effective gaps are not effective.” Gorshkov Group Meeting. (April 2020) Talk. 11. “Estimating multiple functions with quantum sensor networks.” QuICS 5 Year Anniversary Symposium. (Jan. 2020) Poster. 10. “Effective gaps are not effective.” FARQC Kickoff Meeting. (Nov. 2019) Poster. 9. “Confronting lattice parton densities with global QCD analysis.” DNP2019. (Oct. 2019) Talk. 8. “Quantum sensor networks and Fisher information.” Gorshkov Group Meeting. (Aug. 2019) Talk. 7. “Confronting lattice parton densities with global QCD analysis.” Jefferson Lab Theory Seminar. (July 2019) Talk.	
PRESENTATIONS		

6. "Polynomial time algorithms for estimating spectra of adiabatic Hamiltonians." DOE Computation Science Graduate Fellowship Annual Program Review. (July 2019) Poster.
5. "Polynomial time algorithms for estimating spectra of adiabatic Hamiltonians." QIP2019. (Jan. 2019) Poster.
4. "Diffusion monte carlo approach versus adiabatic computation for local Hamiltonians." Gorshkov Group Meeting. (Aug. 2018) Talk.
3. "Diffusion monte carlo approach versus adiabatic computation for local Hamiltonians." UMD Undergraduate Research Showcase. (May 2018) Talk.
2. "Diffusion monte carlo approach versus adiabatic computation for local Hamiltonians." Undergraduate Thesis Defense. (May 2018) Talk.
1. "Diffusion monte carlo approach versus adiabatic computation for local Hamiltonians." QIP2018. (Jan. 2018) Poster.
